Blue Prism v6.5

Automate **Together.** Automate **Better.** Automate **More.**

Blue Prism connected-RPA is an intelligent RPA platform, that is business-led and technology-controlled. With user-friendly design and easy access to AI capabilities, Blue Prism connected-RPA enables operational experts to build innovative process automations—while automatically meeting strict security and compliance standards—with easy to use drag-and-drop AI. This game changing power of choice empowers the entrepreneurial spirit of your business leaders allowing them to innovate and help your business compete.
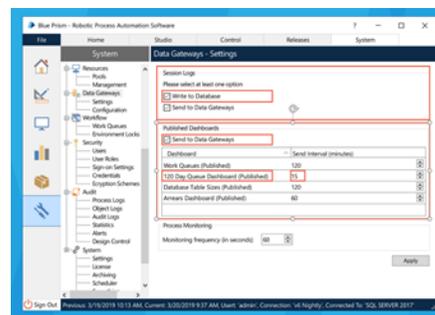

Our Vision:

- Automate More – expand on early RPA endeavors, intelligently and strategically with insight
- Automate Better – build higher-quality process automations, faster and more easily
- Automate Together – try, play and learn quickly and intuitively within a community best-in-class of researchers, providers and experts

Overview

V6.5 allows business leaders to automate better with features that expand on the pillars of scalability and security. This latest version of the Blue Prism platform focuses on data, language expansion and increased security. New features include full Japanese and simplified Chinese language capabilities; outbound data gateways, offering more data control while reducing the amount of storage being used; and IPv6 support. In addition to all new functionality, with v6.5 Blue Prism allows users to choose from best-in-class technologies that are available for instant download via the Digital Exchange and ready for use in the Blue Prism Design Studio. Through simple drag-and-drop functionality, business users can easily build an automated process including their choice of AI, OCR, Machine Learning, Process Mining, and much more. That means no coding or development is necessary to build custom, intelligent automations with unparalleled security.

Features and Benefits

Blue Prism version 6.5, combined with the Intelligent Automation Skills, makes building higher-quality business processes easier than ever before. And because we know that your data is the most critical part of an efficient business process, v6.5 delivers the features to make data more accessible by all of your systems.

Data Gateways – Make it easier to do more with data by providing a mechanism to push data from Blue Prism to external systems such as monitoring tools, reporting engines, data stores or flat files. This includes data such as Session Logs, Published Dashboards and new custom object data.
It also provides more control for managing data in the platform – for example it is now possible to select to only store session logs in an external system.
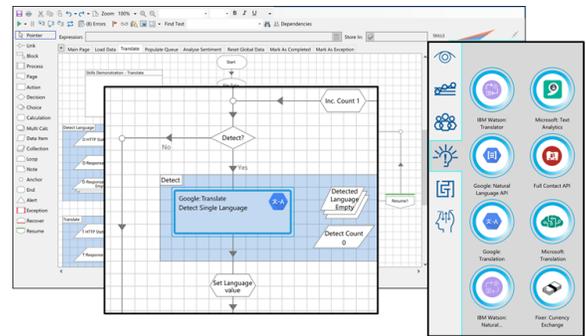

Full Japanese and Simplified Chinese – Connected-RPA is a global solution that gives enterprises throughout the world a competitive advantage. And as Blue Prism continues to be a leader in the innovative Japanese and Chinese markets, we are enabling professionally translated versions of our platform. Through a simple drop-down box a customer can select their preferred language on the Blue Prism interface. Additional languages will be supported in the future.

IPv6 Support: Blue Prism can be deployed in environments that utilize IPv4 or IPv6 network protocols for all connections as well as those that use a hybrid approach, utilizing a combination of both protocols.

Updates to Login Agent to bypass SAS: A new Login Agent version provides the ability to programmatically send Ctrl + Alt + Del as part of the login, to assist in situations where this security policy cannot be disabled.

Google Sheets VBO: Allows Blue Prism to easily create and interact with google sheets to update spreadsheets, create workbooks, add data, work with ranges, and much more.

Work Queue Trends and Analytics: Review trends and patterns and predict resourcing requirements based on changeable volumes.

The Blue Prism Digital Exchange enables business users to very quickly create new industry- and process-specific expansions of the Blue Prism platform.

Visit the Blue Prism customer portal to download version 6.5, and the Digital Exchange to leverage all the business benefits this release offers:

	Knowledge & Insight - The ability to harvest, understand & deliver insights from disparate data sources.
	Learning - The ability to adapt to evolving process patterns & derive contextual meaning.
	Visual Perception -The ability to read, understand & contextualize visual information.
	Problem Solving - The ability to solve logic, business, and system problems autonomously.
	Collaboration - The ability to work seamlessly alongside people & systems.
	Planning & Sequencing - The ability to optimize workloads & discover opportunities for better outcomes.
